This fact sheet is for anyone with advanced (metastatic) prostate cancer that has spread to the bones. Your partner, family or friends might also find it helpful.

We talk about a condition called metastatic spinal cord compression (MSCC). This happens when cancer cells grow in or near to your spine and press on your spinal cord. You might also hear MSCC called malignant spinal cord compression, or spinal cord compression (SCC).

MSCC doesn’t happen to all men whose cancer has spread to the bones. It isn’t common, but it is very important that you’re aware of the risk, what symptoms to look out for and how to get help. For more information on MSCC, speak to your doctor or nurse. You can also speak to our Specialist Nurses, in confidence, on 0800 074 8383.

**What is metastatic spinal cord compression (MSCC)?**

MSCC happens when cancer cells that have spread from the prostate grow in or near to the spine and press on the spinal cord.
The spinal cord is a long thin bundle of nerves and other cells. It runs from your brain down through your spine. The nerves carry messages between your brain and all parts of the body. These messages allow you to move and to feel things like heat, cold, touch or pain. They also help control body temperature and how your internal organs work.

Cancer cells pressing on the spinal cord can cause problems with how these messages are carried. This can cause a range of symptoms that can get worse if left untreated (see the list on this page).

At its worst, MSCC can cause nerve damage and even paralysis, which could mean you can’t walk or use your arms or legs normally. Remember, there are treatments available and getting treatment straight away can lower the risk of this happening, or of it being permanent.

What symptoms do I need to watch out for?

MSCC can cause any of the following symptoms.

- Pain or soreness in your lower, middle or upper back or neck. The pain may be severe or get worse over time. It might get worse when you cough, sneeze, lift or strain, go to the toilet, or lie down. It may also get worse when you are sitting, standing or moving. It may wake you at night or stop you from sleeping.

- Tenderness or pain in your spine when touched.

- Muscle pain or cramping when you walk or exercise.

- A narrow band of pain around your chest or abdomen (stomach area) that can move towards your back, buttocks or legs.

- Pain that moves down your arms or legs.

- Weakness or loss of control of your arms or legs, or difficulty standing or walking. You might feel unsteady on your feet or feel as if your legs are giving way. Some people say they feel clumsy.

- Numbness or tingling (pins and needles) in your legs, arms, fingers, toes, buttocks, stomach area or chest that doesn’t go away.

- Problems controlling your bladder or bowel. You might not be able to empty your bladder or bowel, or you might have no control over emptying them.

These symptoms can also be caused by other conditions, but it’s still important to get medical advice straight away in case you do have MSCC.

What is my risk of developing MSCC?

MSCC isn’t common, about 4 in 100 people with prostate cancer develop it. But you need to be aware of the risk if your prostate cancer has spread to your bones or has a high risk of spreading to your bones. Your risk of MSCC is highest if the cancer has already spread to your spine.

Speak to your doctor or nurse for more information about your risk of MSCC.
What should I do if I get symptoms?

If you get any of the symptoms listed on page 2, you should get medical advice straight away. Don’t wait to see if your symptoms get better and don’t worry if you think it’s an inconvenient time, such as the evening or weekend. Don’t delay – the earlier MSCC is diagnosed, the sooner treatment can be started.

Ask your doctor or nurse to fill in the box below with details of who you should contact in your local area.

Who to contact if I get symptoms of MSCC
Each hospital is different, but your doctor should give you the details of an emergency number to call.

During the day (from ___ am to ___ pm):

At night (from ___ pm to ___ am):

At the weekend (if different to above):

If you don’t have details of who to contact, or your doctor or nurse isn’t available, go to your nearest accident and emergency (A&E) department.

MSCC can be hard to diagnose, particularly if you have other health problems. It can sometimes be mistaken for general back pain, or bone pain caused by your cancer. So it’s important to tell healthcare professionals such as the A&E staff or paramedics that you have prostate cancer and symptoms of metastatic spinal cord compression.

Not everyone will be familiar with MSCC, so it might be a good idea to take this fact sheet or other information about MSCC with you.

How is MSCC diagnosed?

If your doctor thinks you may have MSCC, you will need to have a magnetic resonance imaging (MRI) scan to look at your spine and see if there are any tumours pressing on the spinal cord. If you can’t have an MRI scan, you may have a computerised tomography (CT) scan instead.

What will happen if my doctor thinks I have MSCC?

While you are waiting for a diagnosis, there are a number of things that can be done to make you more comfortable and to help protect your spinal cord from further harm.

• Pain relief
  There are a number of ways to treat the pain caused by MSCC and by the cancer in other parts of your body, including pain-relieving drugs. Read more about these in our fact sheet, Managing pain in advanced prostate cancer.

• A steroid called dexamethasone
  This works quickly to reduce swelling and relieve pressure on the spinal cord. You’ll be given a daily dose as tablets or a drip into a vein in your arm. The dose will be gradually reduced and stopped if your symptoms improve or you start another treatment. You might also be given tablets to help prevent the steroids irritating your stomach.

• Bed rest
  You might be asked to lie flat on your back while you are waiting for a diagnosis. This helps keep your spine still and can reduce the risk of further damage to your spinal cord. You might be given support stockings to wear while you’re lying in bed, to help prevent blood clots. Your doctor or nurse will monitor your condition and let you know when it’s safe for you to gradually sit up.
How is MSCC treated?

If you are diagnosed with MSCC, you should start treatment as soon as possible. Your doctor will explain the different treatment options to help you decide what’s right for you. They will consider your wishes as far as possible. They will also support you and your family after treatment to help you recover from MSCC.

There are two main treatments available – you may be offered one of these, or your doctor may suggest having both.

- **Radiotherapy**
  This aims to shrink the cancer cells that are pressing on your spinal cord. It can also help to relieve the pain. High-energy X-ray beams are directed at the affected area from outside the body. This is known as external beam radiotherapy. You may have one or more treatment sessions – your medical team will discuss this with you. Read more in our fact sheet, Radiotherapy for advanced prostate cancer.

- **Surgery**
  Surgery is sometimes used to treat MSCC. Your doctor will discuss this with you if it’s suitable for you. It usually aims to reduce the pressure on your spinal cord and makes your spine more stable. Surgery is sometimes done at a specialist spinal unit. You might be given radiotherapy once you’ve recovered from surgery, to shrink any areas of cancer that might be left in the spine.

- **Other treatments**
  If radiotherapy or surgery aren’t suitable for you, or if your spine still needs support after treatment, you may be offered a support brace or collar. This fits around your back or neck and helps to support your spine. It can also help with pain. Speak to your doctor or nurse about whether a support brace or collar might be helpful for you.

What happens after treatment?

MSCC can affect men in different ways. Getting treatment early can reduce the risk of long-term problems, but for some men it can take weeks or months to recover. Sometimes the effects can last longer or are permanent. Your doctor or nurse at the hospital will make sure you get the support you need.

If you’re less able to walk and move around because of your MSCC, a physiotherapist can show you exercises that can help.

An occupational therapist can make sure you have the right equipment in your house so that you’re comfortable and can move about more easily.

Your doctor will also look at the treatments you are having for your prostate cancer to see if they need changing.

If you need help to support you living at home, speak to your doctor or ask your local council. The council’s social services may be able to provide a range of support services, such as help with house work, shopping and getting washed and dressed.

You can read about treatments that may be used to help control the growth of prostate cancer in our fact sheet, Treatment options after your first hormone therapy.

There are also treatments that might help with symptoms. Read about this in our booklet, Advanced prostate cancer: Managing symptoms and getting support.
What is my outlook?

Some men with MSCC want to know if it will affect how long they will live. This is sometimes called your outlook or prognosis.

If you have MSCC, this means your cancer is advanced and cannot be cured. MSCC itself doesn’t affect how long you will live. But it could affect your ability to walk and move around if it isn’t treated quickly. And it may be a sign that your cancer is becoming more advanced.

For more information about advanced prostate cancer and how to get support, read our booklet, Advanced prostate cancer: Managing symptoms and getting support.

No one can tell you exactly what your outlook will be as it will depend on many things such as your general health, where your cancer has spread to, how quickly it is spreading, and how well you respond to treatments. But if your doctor has explained that you are approaching the end of your life, you may want to read our information about dying from prostate cancer at prostatecanceruk.org/dying-from-prostate-cancer

Dealing with advanced prostate cancer

Being diagnosed with prostate cancer and MSCC can change the way you think and feel about life. It’s normal to feel scared, worried, stressed, helpless or even angry. Lots of men with prostate cancer get these kinds of thoughts and feelings. But there’s no ‘right’ way to feel and everyone reacts in their own way.

Finding out about things you can do to help yourself can help you to feel more in control. Families can also find this a difficult time and they may need support and information too. They may want to read our booklet, When you’re close to someone with prostate cancer: A guide for partners and family.

How can I help myself?

- Look into your treatment options. Ask your nurse or doctor about any side effects so you know what to expect and how to manage them.

- Talk to someone. Share what you’re thinking – find someone you can talk to. It could be someone close or someone trained to listen, like a counsellor or your doctor or nurse.

- Set yourself goals and things to look forward to. Even if they’re just for the next few weeks or months.

- Look after yourself. Take time out to look after yourself. When you feel up to it, learn some techniques to manage stress and to relax – like breathing exercises or listening to music. If you’re having difficulty sleeping, talk to your doctor or nurse.

- Eat healthily. It’s good for your general health and can help you stay a healthy weight, which may be important for men with prostate cancer. Certain changes to your diet may also help with some side effects of treatment.

Read our fact sheet, Diet and physical activity for men with prostate cancer.

- Be as active as you can. Keeping active can improve your physical strength and fitness, and can lift your mood. But if you have MSCC, your spine can be very weak and easily hurt. So talk to your doctor or nurse about what exercise you can and can’t do after treatment for MSCC.

Visit prostatecanceruk.org/living for more ideas, or read our booklet, Living with and after prostate cancer: A guide to physical, emotional and practical issues. You could also contact Macmillan Cancer Support, Maggie’s, Penny Brohn UK or your nearest cancer support centre.
Who else can help?

Your medical team
You might find it useful to speak to your nurse, doctor, GP or someone else in your medical team. They can explain your diagnosis, treatment and side effects, listen to your concerns, and put you in touch with other people who can help.

Trained counsellors
Counsellors are trained to listen and can help you find your own ways to deal with things. Many hospitals have counsellors or psychologists who specialise in helping people with cancer – ask your doctor or nurse if this is available. You can also refer yourself for counselling on the NHS website, or you could see a private counsellor.

To find out more, visit www.nhs.uk/counselling or contact the British Association for Counselling & Psychotherapy.

Support groups
People affected by prostate cancer get together to share their experiences of living with it. Some groups also hold meetings online. You can ask questions, share worries and know that someone understands what you’re going through. Some groups have been set up by health professionals, others by men themselves. Many also welcome partners, friends and relatives.

Hospices
Your local hospice or community palliative care team can help with emotional, spiritual, practical, and financial advice and support, as well as treatment to manage symptoms such as pain. Hospices aren’t just for people at the end of their life. You can often use their services while living at home.

Spiritual support
You might begin to think more about spiritual beliefs as a result of having prostate cancer. You could get spiritual support from your friends, family, religious leader or faith group.

Prostate Cancer UK services
We have a range of services to help you deal with problems caused by prostate cancer or its treatments, including:

- our Specialist Nurses, who can help with any questions or worries in confidence
- our one-to-one support service, where you can speak to someone who understands what you’re going through
- our online community, a place to ask questions or share experiences
- our sexual support service, delivered over the phone by our trained Specialist Nurses
- our fatigue support, speak to our Specialist Nurses about ways to help manage your fatigue.

To find out more about any of the above, visit prostatecanceruk.org/get-support or call our Specialist Nurses on 0800 074 8383.

“The Specialist Nurses were very helpful and informative. They gave me help and reassurance at a difficult time.

A personal experience"
About us
Prostate Cancer UK has a simple ambition: to stop men dying from prostate cancer – by driving improvements in prevention, diagnosis, treatment and support.

Download and order our fact sheets and booklets from our website at prostatecanceruk.org/publications or call us on 0800 074 8383.

At Prostate Cancer UK, we take great care to provide up-to-date, unbiased and accurate facts about prostate cancer, and other prostate problems. We hope these will add to the medical advice you have had and help you to make decisions. Our services are not intended to replace advice from your doctor.

Courses and physical, emotional and spiritual support for people with cancer and their loved ones.
Donate today – help others like you
Did you find this information useful? Would you like to help others in your situation access the facts they need? Every year, over 52,000 men face a prostate cancer diagnosis. Thanks to our generous supporters, we offer information free to all who need it. If you would like to help us continue this service, please consider making a donation. Your gift could fund the following services:

- £10 could buy a Tool Kit – a set of fact sheets, tailored to the needs of each man with vital information on diagnosis, treatment and lifestyle.
- £25 could give a man diagnosed with a prostate problem unlimited time to talk over treatment options with one of our Specialist Nurses.

To make a donation of any amount, please call us on 0800 082 1616, visit prostatecanceruk.org/donate or text PROSTATE to 70004†. There are many other ways to support us. For more details please visit prostatecanceruk.org/get-involved

† You can donate up to £10 via SMS and we will receive 100% of your donation. Texts are charged at your standard rate. For full terms and conditions and more information, please visit prostatecanceruk.org/terms
